

## How to buy roses for industrial microwave equipment(2)

### 2. Run

Observe the operation of equipment during the test, if it is mass production equipment, the best test to get a certain amount of material, and check whether the device can continuously stable operation, what kind of problems will arise during the operation, for example, the production capacity is 50 kg / hour, should be four times the amount (200 kg) test to determine whether the operation of equipment and production capacity to reach and technical parameters, the trouble some customers do not want or do not want to experiment with a number of materials testing, if appeared satisfied with the purchase of equipment, really affected by the loss of a customer.

### 3, the operation

During the test, should pay attention to the process of understanding and observation equipment, the operation is convenient, equipment and device operation can not be inconvenient to use continuous and stable operation of the device is immature.

### Second, understand the user's situation

Customers understand the use of the equipment, ask dry goods yield, quality, continuity of equipment operation and stability.

### Third, service satisfaction

Equipment manufacturers timely after-sales service, service level and so on.

Fourth, the study should shop around: As the saying goes, "do not know what's not afraid, afraid of confinement," kept in the dark half of listening to people talk, fieldwork test to know the whole picture.
