

## Planetary ball mill

Planetary ball mill is a compacted, finely ground, sample preparation equipment used for nano-material disperse, and for new product development and small batch production of high-tech materials.

Planetary ball mill is also a small, full-featured and high efficiency equipment, it is the ideal equipment for research institutes, universities and corporate laboratories to obtain microparticles research samples (each experiment can acquire four samples) . It can be used with vacuum ball milling tanks, it can grind samples in vacuum.

Planetary ball mill has been widely used in geology, mining, metallurgy, electronics, building materials, ceramics, chemicals, light industry, medicine, beauty, and environmental protection departments, covering nearly 60% of electronic devices of domestic manufacturers.

Langfeng metallic material Ltd undertake the mission "benefiting all under the heaven", creating value for customers, help employees grow and help more people progress and development is our firm goal. We specialize in military new materials of rocket systems , coating materials, carbide, cermet cutting tools and development of raw materials, high speed steel twist drill production and sales. Companies advocating green ideas, energy efficiency is the direction of the company, according to the needs of the company's strategic development, the establishment of an industrial microwave division which is responsible for product development, and production sales.
