

## **What are the features of zirconium carbide?**

Langfeng Metallic Material Ltd produce zirconium carbide powder, with high purity, well-distributed particle size, high performance in aerospace; Zirconium carbide powder produced by Langfeng Metallic Material Ltd. is also equipped with high temperature resistance, oxidation resistance, high strength, high hardness, good thermal conductivity, good toughness, which is a kind of important high melting point, high strength and corrosion resistance of high temperature structural materials, and has a high efficient absorption of visible light, reflecting the characteristics of infrared and energy storage, etc.

Changsha Langfeng Metallic Material Ltd. is specialized in production of zirconium carbide powder, and an integral forming of production, development, sales, services and related solutions,

If you want to know more information about zirconium carbide, please pay attention to our official website products link: <http://www.langfengmetallic.com/powder/zirconium-carbide-powder.html>
