

Guideline of Cemented Carbide Package

I. Main raw material

1.1 The main raw material: various grades of products, package box, cards with trademarks

1.2 The main auxiliary materials: woodencase, foam, paper, nails, transparent plastic.

2 major equipment and industrial equipment

2.1 Major industrial equipment: electronic scales, scales, hammer, pliers.

3. Job quality requirements

3.1 Depending on the product, using different methods and appropriate packaging.

3.2 Content shown in the cards and trademarks labeled outside should be compliant with the quality certificates and products, and with legible handwriting, and correct content.

3.3 product packaging should be compact to avoid damages caused by collapse during transportation.

4. Operation steps and cautions

4.1 based on "after the transfer of production of single"

Check the consistency of grades, items with the quality certificate based on the Manufacturing Transferring Menu, transfer the goods for package, classify the goods according to the grades and items, fill in the "handbook of package received".

Cautions: dump the goods to avoid breakage. Handle with care when transferring and stacking products, no more than 10 boxes stacked, to prevent the collapse to break the products or hurt personnel.

4.2 Based on quality certificate, fill with the card or trademarks labeled outside.

Process requirements: calibrate before weighing scales, the weight will be recorded by round off.

Cautions:

① fill in a card with legible writing, correct and complete content;

② Finish package after weighing.

The facilitator of new materials in the field of science & technologic progress

Become the leader of global in the hartmetall material world
